TRACK AND LEARN

NIGHTSCOUT

#WeAreNotWaiting

Hi!

Sulka Haro

I hack pancreases as my hobby

MakieLab

Sleeping ❤️

**Unconscious due to
low blood glucose**

Readings (mmol/L)

Distributions and Statistics

	Readings	Percent
In Range (3.9 - 7.8)	81	33%
Above (> 7.8)	155	64%
Below (3.3 - 3.8)	4	2%
Hypo (< 3.3)	2	1%
Total Readings	242	

	mmol/L
Average BG	9.2
High BG	17.4
Low BG	2.7
Std. Dev.	3.1

*“Something went
wrong 2 weeks ago.”*

to learn, humans need
feedback in real time

NIGHTSCOUT

#WeAreNotWaiting

Do-It-Yourself Medical Monitor

Diabetes patients and family members devised a system to monitor blood-sugar levels from afar, essentially hacking an FDA-approved device and uploading data to the Internet.

17:23

1 min ago

5.1 ↘

-0.2 mmol/L, BGI: -0.1

73%

Pump **33.275U**

OpenAPS  **14m ago**

3HR 6HR **12HR** 24HR ...

7.1

+0 mmol/L

IOB **0.32U**

BWP **< 0U**

CAGE **57h**

SAGE **2d6h**

-BWP Excess insulin equivalent -0.07U
more than needed to reach low target, not
accounting for carbs

Recent carbs 5g @ 1:53 PM

Current Carb Ratio 1U / 16 g

Carb Equivalent -0.07U * 16 = 2g

Insulin on Board 0.31U

Current target Low: 4.8 High: 5.5

Sensitivity -9 mmol/U

Expected effect 0.31 x -9 = -2.9 mmol

Expected outcome 7.1 - 2.9 = 4.2 mmol

Projected BG below low target aiming at
4.8 mmol

8000 installations, >90% by non-technical people

20,000 member Facebook support group paying it forward

Research Professor of Pediatrics

Diabetes kept me from doing normal activities

Diabetes kept me from spending time at work

HbA1c average drop of over 1%

Huge! *Massively* drops the probability of long-term complications for the users

real-time access to blood glucose data

by **diabetics themselves**

fundamentally transforms diabetes
management

~~I hack pancreases as my hobby~~

I help people with a broken pancreas see what
their bodies are up to

Living with ~~DIABETES~~

Closing the loop:

@DanaMLewis

Food, hormones, sickness, stress

Insulin, exercise, sickness, stress

@DanaMLewis

Cruise control makes it easier to drive your target speed.

@DanaMLewis

In diabetes, insulin is the “gas” pedal.

@DanaMLewis

@DanaMLewis

**An artificial pancreas is the closest thing to
“cruise control” for diabetes.**

**...But an artificial pancreas is not yet
commercially available.**

@DanaMLewis

**The current tools are
not perfect....**

**....and not
interoperable.**

@DanaMLewis

User-driven innovation

All I wanted (at first): louder CGM alarms

@DanaMLewis

Where I ended up: an “open loop”, smart alarm system with predictive recommendations

@DanaMLewis

What happens if we “close the loop”?

@DanaMLewis

**We have in our
pockets the tools
needed for an
“artificial pancreas”.**

@DanaMLewis

Components of an open source artificial pancreas

1. Continuous glucose monitor
2. Raspberry Pi (“controller”)
3. Battery
4. CareLink USB stick (“translator”)
5. Insulin pump

(Illustration by Clint Ford for Popular Science)

@DanaMLewis

#OpenAPS:

Taking the DIY, artificial pancreas from (n=1) to (n=1)*many by:

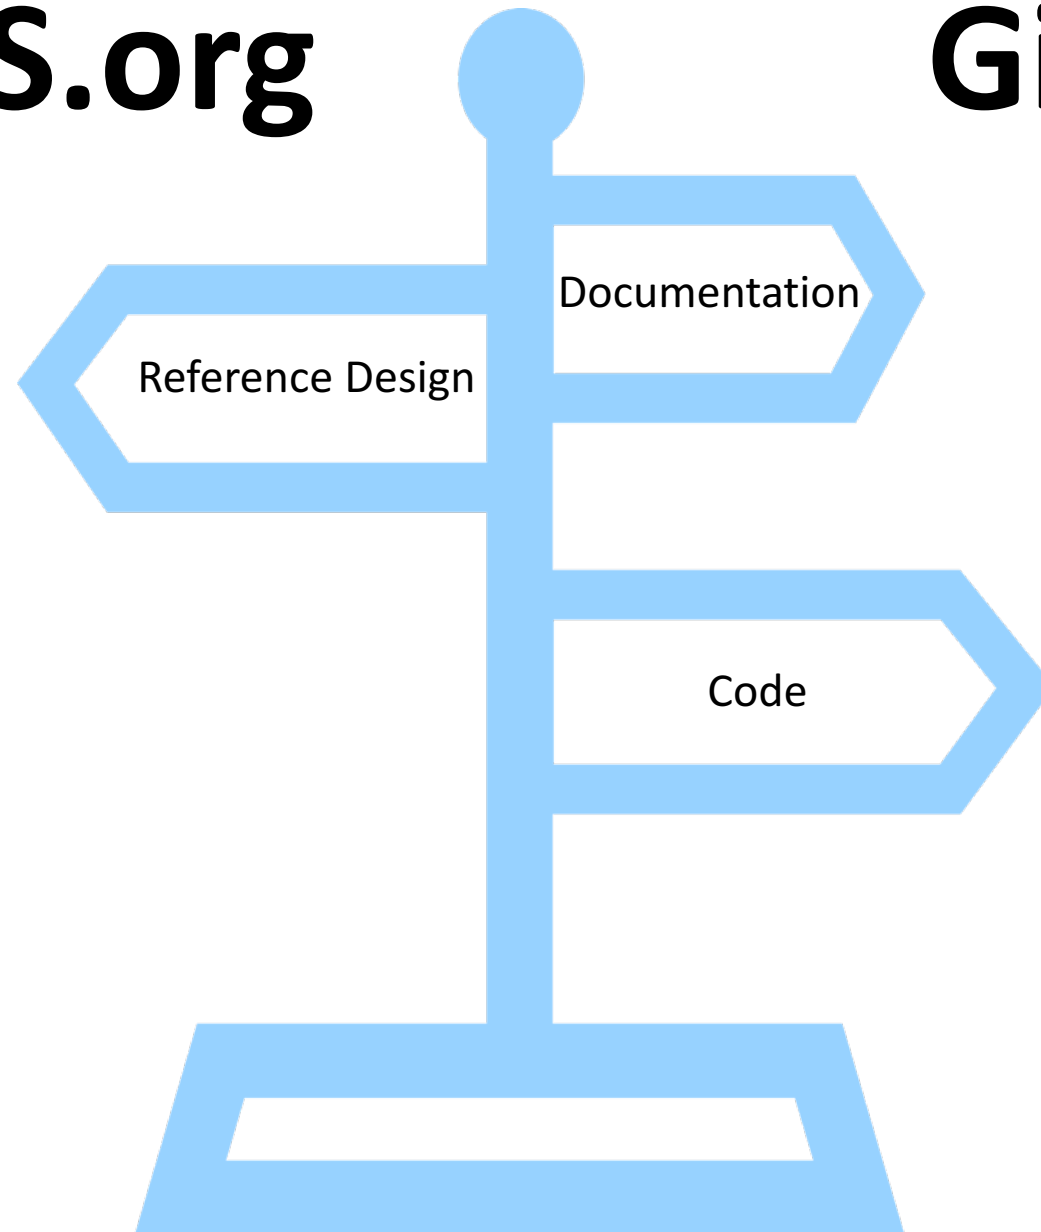

- Focusing on safety
- Limiting dosing ability in hardware and software
- Using same dosing calculations a person would use
- Responding (or not) to unexpected data
- Tolerating communication failures
- Failing back safely to standard device operation

@DanaMLewis

OpenAPS.org

Github.com/ openaps

@DanaMLewis

(It's not “rocket science”)

```
28
29 if (predBG < min) { // low-temp for 30m (to zero or as required to get predBG up to min)
30     var rate = Math.max(0, $basal-2*(min-predBG)/isf); // calculate required low-temp rate
31     var duration = 30; // always set temps to the minimum duration supported by the pump
32     if (! typeof currentTempRate === 'undefined' && rate < currentTempRate) {
33         setTemp(rate, duration);
34     }
35 } else if (predBG < target) { //cancel any high-temp; let any low-temp run
36     if (! typeof currentTempRate === 'undefined' && currentTempRate > basal) {
37         setTemp(0, 0); // cancel temp
38     }
39 } else if (predBG > max) { // high-temp as required to get predBG down to max (up to basal+highTempMax U/hr)
40     var rate = $basal + Math.min(highTempMax,2*(predBG-max)/isf)
41     if (! typeof currentTempRate === 'undefined' && rate > currentTempRate && iob < maxIOB) {
42         setTemp(rate, duration);
43     }
44 } else if (predBG > target) { //cancel any low-temp; let any high-temp run
45     if (! typeof currentTempRate === 'undefined' && currentTempRate < basal) {
46         setTemp(0, 0); // cancel temp
47     }
48 }
```

@DanaMLewis

Who is regulating this activity? Users are.

- Most users “test” their own medical devices.
- The QA approach is even stronger when utilizing open source tools made with/by/for the community.
- (Individual experiments with “off label” use of medical devices are not a regulated activity.)

@DanaMLewis

#OpenAPS is now $(n=1)*108+$

@DanaMLewis

The future of #WeAreNotWaiting:

- We are not done yet. We still have diabetes, we still have other tools we can improve on.
- This will happen in other areas of healthcare.
- The healthcare industry will need to figure out how to deal with new sources of patient-generated health data.

@DanaMLewis

#WeAreNotWaiting

to change the future of healthcare.
